Focus Flow Pets v1.0

a pet care and health tracker for one or more pets: daily routine checklist (feed, walk, meds, litter), vaccine / flea / worm reminders with next-due dates, vet visits, weight trend, costs, a symptom log you can bring to the vet, and a printable pet card.

Hi. This will be quick.

Focus Flow Pets is a real app that lives in a single file. There is no account, no server and nothing to install. Each pet gets a daily routine that becomes a checklist, health records with next-due dates that become reminders, a weight trend, a log for what you notice, and a printable card for the vet or the sitter. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Pets.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Pets-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 **Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 **Open Focus-Flow-Pets.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 **Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 **Answer 3 quick questions:** your pet, the dates from the vaccination booklet, a typical routine. Or tap *"Explore with example data"* first.
- 5 **Tick the routine** on Today as you go. Log a line when something is off.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

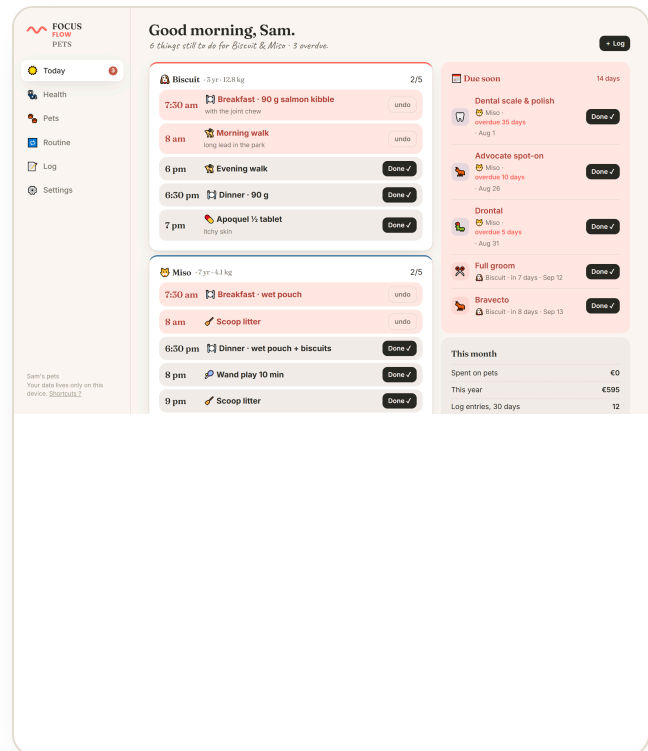

Every pet, every task, what's due

One card per pet with the day's routine in time order — breakfast, walk, meds, litter — and a **Done** ✓ per item (undo if you tapped by mistake). The header shows age and last weight.

Due soon lists health items due in the next 14 days across all pets: flea, worming, vaccine, grooming, insurance. Overdue turns coral. **Done** ✓ logs it today and sets the next date automatically.

Quick log: pick the pet and a type, type one line. **This month** shows what you've spent and how many log entries you've made.

Press **n** anywhere to log an entry with all the fields.

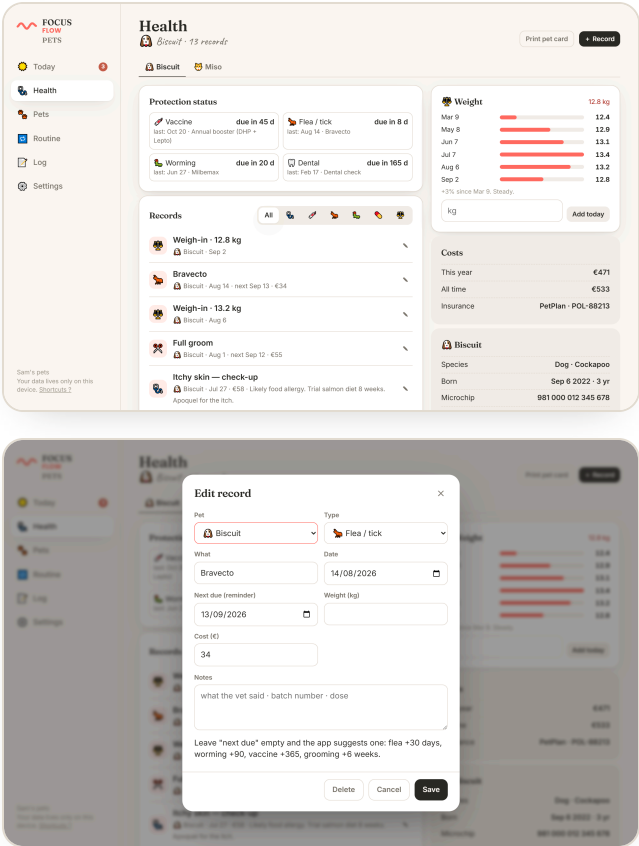

Protection status, records, weight, costs

Pick a pet at the top. **Protection status** shows vaccine, flea/tick, worming and dental with the next-due date and the last record. **Records** lists everything — vet visits with what the vet said, treatments, medication, weigh-ins — filtered by type.

Adding a record: type, what, date, next due, weight, cost, notes. Leave "next due" empty and the app suggests one: flea +30 days, worming +90, vaccine +365, grooming +6 weeks, dental and insurance +1 year.

Weight shows the last eight weigh-ins as bars and the change since the first. A 10% change is flagged — that's the number vets care about. **Costs**: this year and all time for this pet. **Print pet card** puts identity, chip, vet, insurance, vaccines, daily meds and sitter notes on one page.

Profiles and the daily checklist

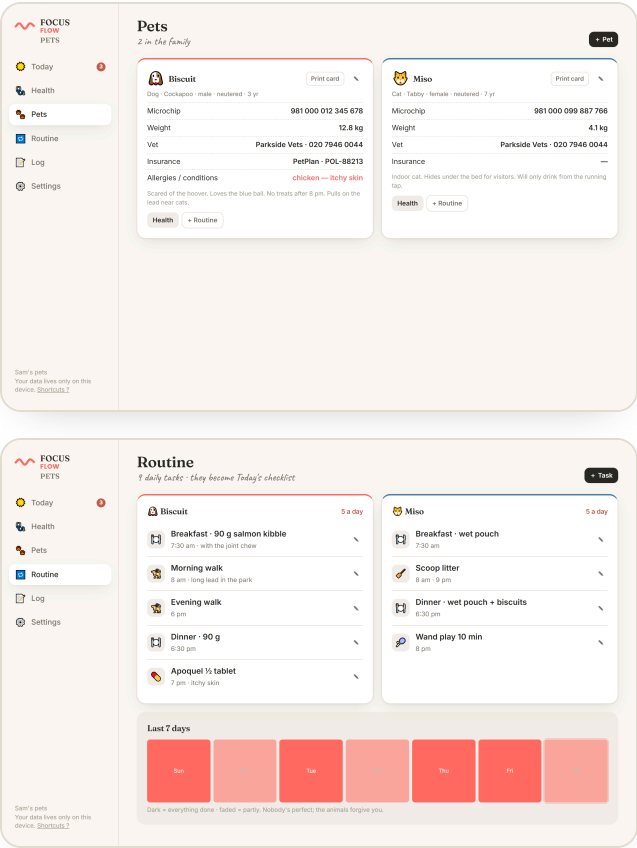

Pets

Name, species, emoji, breed, born or adopted, sex, neutered, microchip, vet, insurance, allergies and conditions, notes for a sitter, colour. Add as many as live with you; each gets its own colour everywhere.

Routine

Daily tasks per pet: type (feed, walk, meds, litter, groom, play, water), name, times, notes.

Load a typical routine for the species and edit it. Tasks appear on Today at their times; the **last 7 days** grid shows how the week went. Nobody's perfect; the animals forgive you.

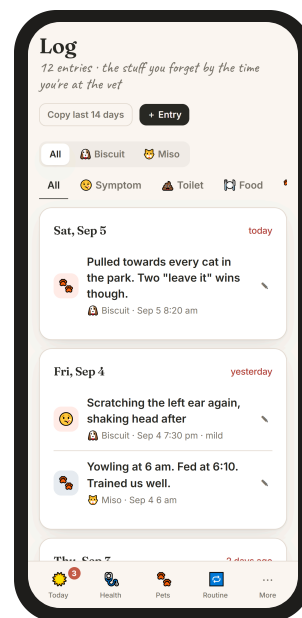

What you forget by the time you're there

Symptom (with mild / moderate / bad), toilet, food, behaviour, good moment, note. By day, filtered by pet and type. **Copy last 14 days** puts it on the clipboard as plain text with dates.

Vets get ten minutes and a nervous animal. "Scratching the left ear, three times this fortnight, worse after the park" with dates is half a diagnosis. "Bad" means call the vet today — trust it.

Weigh monthly: you on the scales, then you holding them. Write it in the Health screen. The trend matters more than the number.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

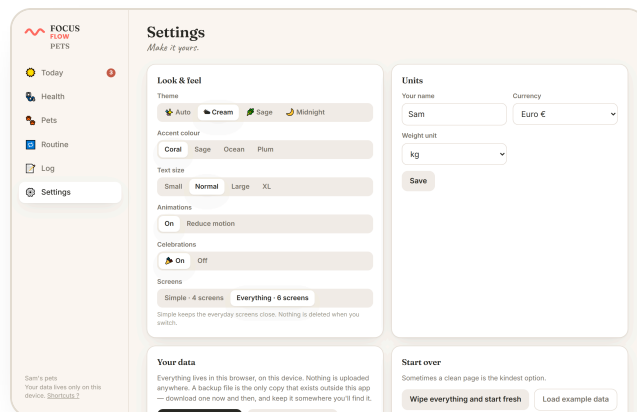

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-pets/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Does it remind me at task times?

Not by itself — it is a file, not a service. The Today badge counts what's overdue; set phone alarms for the fixed ones (meds).

Several people look after the pets?

Keep the file on a shared tablet or device at home — everyone ticks the same checklist. Or share a backup weekly.

Pounds instead of kilos?

Settings → Weight unit. Numbers are labelled, not converted.

A pet passed away.

Keep the profile — the records stay. Or delete it; the app asks first.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
