

FOCUS FLOW · PLANTS

Quick Start Guide

from download to your first watered plant in 3 minutes

Focus Flow Plants v1.0

a houseplant care app for people who forget to water: every plant with its own watering rhythm that adapts to the season, a Today list of what needs water, feed, mist or a turn, one-tap logging, a care history per plant, a plant profile with light and pot notes, and a sick-plant checker.

Hi. This will be quick.

Focus Flow Plants is a real app that lives in a single file. There is no account, no server and nothing to install. Every plant has its own rhythm for water, feed, mist and turning; the Today screen lists exactly who needs what; one tap logs it and sets the next date. Winter slows the rhythm automatically. The soil is the truth, the app is the reminder. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Plants.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Plants-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Plants.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** which species you have (16 presets), which room, when you last watered. Or tap *"Explore with example data"* first.
- 5 Each day, open Today.** Finger in the soil. Dry? **Watered**. Damp? **not yet** — it pushes two days. Both take one tap.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

TODAY

Who needs what

A card per plant with a button for each thing due: 💧 Water, 🪄 Feed, 🌫️ Mist, 🔄 Turn, with "late" counts if you missed a day. **not yet** pushes the water date two days when the soil is still damp. **Thirst at a glance** shows every plant from red (overdue) to green (fine). The side column shows the season, the last 7 days of care, and the rule.

Overdue is not an emergency. Most plants forgive a missed week; almost none forgive being watered while wet.

By room, with rhythms

Add a plant: tap the species and the water and feed intervals, light and a tip are pre-filled; name it, pick a room, add pot and soil notes. Each card shows its rhythms with the next date, a Watered button, "more..." for feed / mist / turn / repot / prune / wipe / note, and a **Profile** with the full history and how often you *actually* water it.

Rhythms are per plant, so the calathea on every 4 days and the aloe on every 14 live happily in the same list.

What's coming

Week: seven columns, every plant's water, feed, mist and turn on the day it falls. Late items show red on Today. Print it for the neighbour when you're away; the going-away card has the checklist.

Season: from November to February (automatic, northern hemisphere; manual switch in Settings for the south) watering intervals stretch by half and feeding pauses. Plants grow slowly in winter and drink less; most winter deaths are from love.

What went wrong, and when

Plant doctor: twelve common symptoms with plain fixes — yellow leaves with wet soil (overwatering), brown crispy tips (dry air), drooping wet or dry, lower leaves dropping, pale stretched growth, spider mites, mealybugs, fungus gnats, stem rot, soil mould, sunburn — and the order to check: soil, light, pests, pot, recent changes.

History: every tap, per plant or all, by month. Repots, prunes, and notes like "new leaf!" live here too. Delete a mistaken tap with x.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-plants/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Does it send reminders?

The Today badge shows how many plants need you, and the Week screen shows what's coming. There are no push notifications — it's a file, not a service — so a morning glance with the coffee is the habit.

My plant isn't in the 16 presets.

Add it with any name and set the intervals yourself. Start with the closest preset and adjust after a few weeks; the Profile shows how often you really water it.

Southern hemisphere?

Settings → untick automatic winter, and tick the manual winter switch from May to August.

Outdoor plants and a balcony?

They work the same. Put them in a "Balcony" room; in summer, shorten the water interval.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
