 Wind-down

 Last night

Tonight

Wind-down starts 11 pm

Lights out goal 11:30 pm

Wake goal 7 am

 Start wind-down · 30 min

Last 14 nights

7 7 7 7 6 7 7 7 8 7 6 7 7 8

Coral = at goal (7.5 h) · light = close · red = short. Tap a night to edit.

This week

Average 7 h 03 min

Short of goal, 7 days 3 h 15 min

Not a debt to repay in one night. One earlier bedtime this week is plenty.

Sam's sleep

Your data lives only on this device. [Shortcuts ?](#)

Focus Flow Sleep v1.0

a sleep & energy tracker for ADHD brains: a wind-down routine with a timer, a two-tap sleep log, morning energy check-ins, caffeine, screens and meds as factors, and patterns that show what actually helps.

Hi. This will be quick.

Focus Flow Sleep is a real app that lives in a single file. There is no account, no server and nothing to install. You log a night in two taps, tap your energy three times a day, and run the same wind-down every evening with a timer you can see. After two weeks the app shows you which factors actually matter for you. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Sleep.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Sleep-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Sleep.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** a realistic bedtime, a few wind-down steps, last night. Or tap *"Explore with example data"* first.
- 5 Tonight, press Start wind-down.** Tomorrow morning, two taps for the night. That's it.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Last night, energy, tonight

Last night. Hours, bed → up, quality emoji, factors. No night logged yet? Four preset chips (11 pm → 7 am, and so on) log it in one tap; you can fine-tune afterwards.

Energy today. Three rows — morning, afternoon, evening — 1 to 5. Tap whenever you remember. This is what lets the app link sleep to how you actually feel.

Tonight. When the wind-down starts (lights-out goal minus the wind-down length), the lights-out goal, the wake goal, and a caffeine-cutoff nudge in the afternoon. **Start wind-down** opens the timer.

Last 14 nights is a grid: coral at goal, light close, red short. Tap a night to edit. **This week** shows the average and how far short of goal you are — not a debt to repay in one night.

Press **n** anywhere to log last night, **w** to start the wind-down.

Same steps, same order, a disc that shrinks

The wind-down is one timer for the whole evening ritual (30 minutes by default) plus a list of steps you tick as big buttons: phone on charge outside the bedroom, dim the lights, teeth, meds, read. The disc shrinks so you can see the evening ending. When it's empty: bed, even if the steps aren't all done. A soft two-note chime, no alarm.

Tomorrow's three things

The box at the bottom is for the thoughts that would otherwise loop at 1 am. Park them; they show on Today tomorrow morning.

Editing steps

✎ Steps opens a list — one per line, emoji, text, minutes — with nine suggestions to tap. Fewer is better. Three steps you actually do beat nine you don't.

Switch to the Midnight theme (or Auto) in Settings so the screen is dark at 11 pm.

Two taps, three taps

Logging a night: lights out, got up, optional minutes to fall asleep and times awake, a quality emoji, factor chips (caffeine after cutoff, screens in bed, meds taken late, alcohol, exercise, nap, stress, late meal, hyperfocus late, doom-scrolling...) and a note. A wake time earlier than the bed time is read as "past midnight".

The **Sleep log** lists every night with hours, quality and factors; short nights are flagged. Edit or delete any row.

Energy

A 14-day grid — morning, afternoon, evening — with hours slept underneath. **Sleep** → **energy** compares your next-day energy after nights at goal versus short nights. **Best bedtime for energy** groups nights by the half-hour you went to bed and shows the average next-day energy for each.

Numbers, not verdicts

Pick 14, 30 or 90 days. A bar per night (coral at goal, red short), the average, and after seven nights a few plain-English **insights**: how many nights ran short, how much your bedtime moves around, which factor rates lowest, which rates highest.

Factors compares quality and hours with versus without each factor, from your own nights. **By day of the week** often finds the Sunday-night problem. Usual bedtime and bedtime consistency ($\pm$ minutes) are shown — for ADHD brains, a steady bedtime often beats an earlier one.

Print gives a clean page to bring to a doctor if sleep is a real problem.

This is a tracker, not medical advice. Persistent insomnia, snoring or extreme daytime sleepiness deserve a real conversation with a clinician.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-sleep/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

I go to bed at 2 am. Is the app going to nag me?

No. Set a realistic lights-out time in Settings — the wind-down starts relative to that. Consistency matters more than the number.

Does it track sleep automatically?

No — there is no sensor and nothing running in the background. Two taps in the morning is the whole job, and it works on every device.

Naps?

Tick the "Nap" factor on that night. Patterns will tell you whether naps help or hurt your nights.

Can I use it for a child?

Yes — log their nights and energy the same way. Keep a separate copy of the file per person.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
