Focus Flow Money v2.0

An offline budget app for ADHD & neurodivergent brains

Hi. This will be quick.

Focus Flow Money is a real app that lives in a single file. There is no account, no server and nothing to install. You open the file in the browser you already have, type a few numbers, and it shows you **one** honest figure: what's safe to spend until your next payday.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (page 9). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Money.html	The app. Keep this file somewhere safe (your Documents folder is perfect). Don't rename it if you like, but you can.
Focus-Flow-Money-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide.

The 3-minute start

- 1 **Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 **Open Focus-Flow-Money.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 **Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 **Answer 4 small questions:** your name (optional), your balance, when you get paid, and a few bills. Or tap *"Explore with example numbers"* to poke around first.
- 5 **There it is.** Your safe-to-spend number. From now on: log spends as you go, check in with your bank once a week, and tap "Update balance".

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

One number, and how it's worked out

Safe to spend = the balance you typed – bills still to go out before payday – anything you set aside in Settings. Every spend you log is subtracted immediately, so the number stays honest between bank check-ins.

Tap **"How is this worked out?"** any time and it lists every figure that made the number. No mystery maths.

≈ per day is the same number divided by the days until payday. Many people find the per-day figure easier to feel than the total.

Right now — one thing only

The top-right card holds a single next step. Not a list. Do it, tap Done, and pick another — or tap "Suggest one" and the app picks a sensible small step from what it can see.

Focus mode

When even this screen feels like too much, tap **Focus mode**. Everything but the number and the one step disappears.

Update balance • Accounts

Open your banking app, read the number, type it in. Once a week is plenty. Have cash, a second card or a joint account? **Settings** → **Accounts** adds them; tick "counts" on the ones that should feed the safe-to-spend number and leave savings pots unticked.

Pace this period

The small card under "Right now" shows how far through the pay period you are, what you've spent per day so far, and what's left per day. A gentle 7-day logging streak lives there too — any day counts, and it never scolds.

Three seconds, then move on

The **Quick add** box on Today is built for speed:

- Tap a quick amount (\$5 / \$10 / \$20 / \$50 — change them in Settings), pick a category, Add.
- Or type **"45 groceries"** straight into the amount box and press Enter. It understands "12.5 coffee", "30 pets", "80 shopping".
- Anywhere in the app, press **Ctrl/Cmd + K** to log a spend.

Mistyped? Every spend sits under the number with ✎ edit and ✕ delete. Deletes can be undone from the little black toast.

Categories & envelopes

Ten warm categories are included. On the **Spending** screen, tap "Edit budgets" to give any of them a monthly amount — that turns it into an envelope with a colour bar (green → amber at 85% → red over). Leave a budget at 0 to just track. Add your own categories with an emoji and a name.

Envelopes are optional. Plenty of people use only the safe-to-spend number and never set one. Both are fine.

Trends, search, categories

The six-month bars show the shape of your spending; ▲ ▼ arrows compare each category with last month. Tap a category to filter, type in the search box to find "coffee" or "45", and use "Edit budgets & categories" to rename, re-emoji, delete or add categories.

BILLS

Bills that come round however yours do

Add a bill with a name, amount, category and its rhythm:

RHYTHM	USE IT FOR
Once a month	rent, phone, most things — on the day you pick
Two days a month	e.g. the 1st and the 15th
Every 2 weeks	therapy, childcare — give it a recent date it happened
Every week	cleaner, lessons, weekly transfers
Every few months	water every 3 months, car tax every 6
Once a year	annual subscriptions, insurance renewals
Just once	a one-off you don't want to forget

Tick **autopay** if it leaves your account by itself.
Tick **subscription** to include it in the Subscription audit.

Must-pays

Soonest first, with a checkbox. Tick when it's paid — the money is then no longer counted as "still to go out". Anything that slipped past sits in its own gentle box at the top; tick it when handled, move its date, or tap $\approx$ to **skip** just that occurrence (a bill that didn't apply this month). A small red badge on "Bills" tells you how many are overdue.

Subscription audit

Every subscription is shown as what it really costs **per month** — a \$69.99-a-year app is \$5.83/mo. For each one, tap **Keep** or **Cancel**. "Cancel" is a decision, not a deletion: it sits there until you've actually cancelled with the company, then you delete the bill. The green box adds up what's back in your pocket per year.

Want it? Park it. Decide later, calmly.

This is the ADHD-first feature. When something shiny grabs you, don't put it in the cart — put it here.

1. Tap **Pause a purchase**. Name, price, how long to pause (24h, 48h, 3 days, 7 days, 30 days) and — honestly — why you want it.
2. Close the shop tab. The app shows a countdown ring.
3. When the pause is over, the item asks: *still want it?* Tap **Yes, buying it** (and log the spend in one tap) or **Let it go**.

Both answers are wins. Buying on purpose after a pause is not an impulse buy. Letting go adds the price to your **"Kept by pausing"** total — a number that grows surprisingly fast.

Set your hourly rate in Settings and every paused item also shows as hours of your work. "11.3 hours" lands differently than "\$249".

Brain dump

The one screen with no amounts, no dates and no categories. Type the money thought buzzing in your head and press Enter. Later, turn a thought into a bill or into today's one step with a single tap — or just tick it off.

Paycheck plan, goals and debts

These three screens appear when you switch Settings → Screens to **Everything**. (Simple mode keeps the everyday six.)

Paycheck plan

Pick a paycheck and the app lists the bills that land before the next one, subtracts your goal contributions and any extra to debts, and shows **"Left for living"** with a per-day figure. Short period? It says so before it happens, so you can move a bill or pause a goal contribution this once.

Goals

Named pots: "Emergency cushion", "Trip to see Jo", "Quiet month fund". Each shows progress, milestones and months-to-go at your monthly amount. "Add money" moves the amount out of your safe-to-spend so the two numbers agree.

Debts

Add each debt with its balance, interest rate and minimum. Choose **Snowball** (smallest first — quick wins) or **Avalanche** (highest rate first — least interest) and try an "extra per month" to see how the debt-free date moves. Log payments as you make them.

The whole month on one page

Paydays in green, bills in amber (struck through once paid), and your daily spending total in grey. The three tiles at the top give income vs bills vs everyday spending — and what's left over.

Print / PDF turns the month into a clean one-page report you can file or share with a partner or support person.

The 2-minute month review

At the bottom: one thing that went well, one thing you'll change next month (just one), and how money felt. It's saved per month. Looking back at these after a few months is quietly powerful.

Where your numbers live, and how to keep them safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Nobody can see your money. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a "Money" folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives or emailing to yourself. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Export

Export spends as CSV gives you a spreadsheet-friendly file of every spend with date, amount, category and note.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Two people, one household? Each person opens the file in their own browser profile — data is kept separately. Or share one backup file to move numbers between you.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-money/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow Money icon that opens full-screen, works offline and keeps your numbers on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move numbers between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your numbers aren't already there (they usually are, when the file stays in the same folder and the same browser).

Little questions, quick answers

The number is negative. Now what?

It means bills before payday are bigger than what's in the account. That's information, not a verdict. Look at the Paycheck plan for that period; check the Subscription audit; see if a bill can move a few days. The app never hides a negative number — hiding is how things get worse.

I forgot to log things for a week.

Welcome to the club. Just tap Update balance with the real number from your bank. The app resets from there. Logging is a habit that helps, not a test you can fail.

Can I use a different currency?

Yes — Settings → Currency symbol, and choose whether it goes before or after the number. Any symbol or letters work (£, €, ¥, CHF, kr...).

My paycheck isn't the same every time.

Add your usual amount and a typical date. Edit the amount when you know it. Freelancers: add one "income" per client or per month, whatever is simplest.

Can two people share it?

The file is licensed for personal use in one household. Each person uses their own browser profile, or you keep one plan together — both work.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
