

FOCUS FLOW · DEBT

Quick Start Guide

from download to a debt-free date in 3 minutes

Focus Flow Debt v1.0

a debt payoff planner: every debt on one screen, snowball vs avalanche compared in real numbers, a debt-free date that moves when you log a payment, this month's due dates, and progress milestones.

**FOCUS
FLOW**

Hi. This will be quick.

Focus Flow Debt is a real app that lives in a single file. There is no account, no server, no bank connection and nothing to install. You type each debt once; the app orders them (snowball, avalanche or your own order), simulates every month, and gives you a debt-free date that moves every time you log a payment. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Debt.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Debt-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 **Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 **Open Focus-Flow-Debt.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 **Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 **Answer 3 quick questions:** your currency, up to three debts, your extra amount. Or tap *"Explore with example data"* first.
- 5 **Log payments** as you make them (Overview → "Paid min", or **n**). Watch the date.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Still owed, the end date, the focus debt

Still owed and **debt-free** sit at the top, with the interest you'll still pay and the next milestone. The bar is what you've paid off since you started.

Focus debt is the one getting your extra this month, with the exact amount to pay ("min + your extra") and roughly when it's gone. Everything else gets minimums only.

This month is a checklist of due dates. **Paid min** logs the minimum in one tap; **other** opens the payment form. When a debt is paid this month it shows a tick. Overdue ones say so.

Snowball vs avalanche shows both methods in your real numbers, and says whether the difference matters.

Press **n** anywhere to log a payment.

Type it once, from the statements

Debts

A debt has a name, a type (card, store card, BNPL, loan, car, student, medical, family, overdraft, tax, other), the balance now, the APR (0 if interest-free), the minimum payment, an optional due day and a note ("0% ends in March"). Each card shows progress since you started, interest per month right now, and when it's gone on the current plan.

Update balance when a statement arrives — interest and fees change the number. Logged payments still subtract from it.

Payments

Every payment lowers the balance and recalculates the plan. When a balance hits zero the debt is marked paid off, the app celebrates, and its minimum joins your extra. Deleting a payment puts the money back.

Snowball, avalanche, or your order

The plan simulates month by month: interest is added, minimums are paid on everything, and the extra — plus the minimums of debts already gone — goes to the first debt in the order.

 **Snowball** pays the smallest balance first. The maths is slightly worse; the first "paid off" arrives much sooner. For most ADHD brains this is the right call.  **Avalanche** pays the highest APR first: cheapest overall.  **My order** lets you move a family loan or the card that stresses you most to the top.

What if I add a bit more? shows the end date and interest for +25, +50, +100, +200, +300 a month, and what each saves. **Balance over time** is the curve to zero. **Stuck debts** warns when a minimum doesn't cover the interest.

Milestones instead of shame

Milestones at 25, 50, 75 and 100% paid, each with how far away it is. **Paid per month** for the last eight months. **Numbers:** started with, still owed, debts paid off, interest per month right now, interest still to pay, and what your extra saves compared with minimums only. **Paid off** lists the ones that are gone.

Why one extra on one debt. Spreading extra money across five debts feels fair and achieves nothing visible for years. Pointing all of it at one debt makes that debt disappear — and a disappeared debt is the thing that keeps you going. Minimums everywhere else.

The extra can be small. €25 a month, kept up, beats €300 once. Change it any month in Settings — the plan recalculates.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-debt/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Does it connect to my bank?

No, on purpose. You type the numbers from your statements. Nothing leaves your device.

My minimum is less than the interest.

The Plan flags it as stuck. Put the extra there first, or call the lender — a lower rate or a payment plan is often one phone call away.

A 0% deal that ends later?

Enter APR 0 and put the end date in the note. When it ends, edit the APR — the plan updates.

Two people, one file?

Keep two copies of the file in two folders, or use two browser profiles — each has its own data.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
