Sam's fit
Your data lives only on this device. [Shortcuts ?](#)

Good morning, Sam.

3 of 3 this week. Target met — anything else is a bonus.

Next up

**Full body A**

Start

4 exercises · ~30 min · Squat, Push-ups, Bent-over row, Plank

Or something else

 Full body B · 30 min

 10-minute bodyweight · 10 min

 Walk · 30 min

 Stretch & mobility · 10 min

 Minimum: 5 minutes of anything · 5 min

Last workout

yesterday

**Bike to work**

25 min · 0 sets

★★★★★

This week

target 3

Mon	Tue	Wed	Thu	Fri	Sat	Sun
.		.			.	.

3 / 3

Days with any movement. Minimum days count. No streaks, no "broken".

Log something else

What	Minutes
Bike to work	20

Focus Flow Fit v1.0

an ADHD-friendly workout tracker: routines with tap-to-log sets prefilled from last time, an automatic rest timer, a 5-minute minimum workout, weekly targets instead of streaks, and progress per exercise.

**FOCUS
FLOW**

Hi. This will be quick.

Focus Flow Fit is a real app that lives in a single file. There is no account, no server and nothing to install. Routines rotate so "next up" is decided for you; sets are prefilled from last time so logging is one tap; the rest timer starts by itself; and on bad days there is a 5-minute minimum that counts exactly the same. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Fit.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Fit-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Fit.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** your name and unit, your routines, your rest time. Or tap *"Explore with example data"* first.
- 5 Press Start on Today.** Tap each set as you finish it. Tap Finish ✓ — even halfway through.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Next up, this week, and the minimum

Next up is the main routine after the last one you did — Full body A, then B, then A. No deciding. **Or something else** lists the rest: short routines for busy days, walks, stretches. 🔥 **5-minute minimum** is always in the corner.

This week shows seven boxes and a bar: days with any movement against your target. Minimum days and bike rides count. When you hit the target, the app says so and stops nagging.

Log something else records anything that isn't a routine — "walked the dog, 25 min" — in two fields.

Press **s** to start the suggested workout, **m** for the minimum.

One tap per set

Each exercise is a card; each set is a chip already filled with what you did last time ("8 × 20 kg", "30 s"). **Tap the chip** when the set is done. Tap  only if the reps or weight changed; **+ set** adds one. On a keyboard, Enter logs the next set.

After a set with weights, the **rest timer** starts on its own (default 90 s, yours in Settings). It counts down on the right, chimes when it ends, and can be skipped or extended by 30 s. Time blindness turns a 90-second rest into eight minutes of scrolling — the chime brings you back.

Finish ✓ asks how it felt (five faces), the minutes, and one optional line. **Keep going** closes it. Stopping halfway is a workout: Finish ✓ saves what you did.

The workout survives a closed tab. Cancel drops it without saving.

Shapes, not prescriptions

Routines

A routine is a name, an emoji, a rough length, a type and a list of exercises. **Main** routines rotate as "next up"; **short** ones are for busy days; **minimum** is the bad-day version. Each exercise has sets, a target and a mode: **reps** (with a weight), **sec** (holds) or **min** (walks, bike). Six starters are included — two full-body days, a 10-minute bodyweight routine, a walk, stretches and the 5-minute minimum. Duplicate one and edit it rather than starting from a blank page.

Log

Every finished workout, by month, with minutes, sets, weight moved, your note and how it felt. Tap ✎ to fix a date or a feeling; delete has undo.

Slow is fine

Progress

Days moved per week for the last eight weeks, against your target — and how many weeks hit it. A missed week is a missed week, not a reset. **Last 30 days:** workouts, minutes, sets, weight moved, average feel, minimum workouts (those are the system working). **Per exercise:** your best set and the change since the first one. **Body** is optional: a weight entry now and then, nothing more.

Timer

A timed session (walk, bike, stretch) with a shrinking disc and optional body-doubling noise. When it ends, one tap logs it as a workout. Rest presets from 30 s to 3 min live here too.

Set the weekly target you would hit on a bad month. Two, kept for a year, beats six for three weeks.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-fit/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

I only walk. Is this for me?

Yes. Make Walk your only main routine (or use "Log something else"). The week bar and the target work the same.

Pounds instead of kilos?

Settings → Weight unit. Existing numbers are not converted; they are just labelled.

Can I add a set during the workout?

Tap "+ set" under the exercise. It copies the last set's numbers.

Two people, one file?

Keep two copies of the file in two folders, or use two browser profiles — each has its own data.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
