Focus Flow Habits v1.0

an ADHD habit tracker without streaks: minimum versions for bad days, habit anchors, weekly targets, a month heatmap and honest patterns.

FOCUS
FLOW

Hi. This will be quick.

Focus Flow Habits is a real app that lives in a single file. There is no account, no server and nothing to install. Every habit has a minimum version and an anchor; a bad day switches everything to minimums; the numbers say "9 of the last 14 days" and never "streak broken". That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Habits.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Habits-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 **Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 **Open Focus-Flow-Habits.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 **Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 **Answer 3 quick questions:** your name, three habits from the list, one of your own. Or tap *"Explore with example data"* first.
- 5 **Tick a habit** on Today — or tap *min* for the minimum version. Both count.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Grouped by time of day, with minimums one tap away

Habits are grouped into morning, afternoon, evening and any time. Each row shows its anchor ("after coffee"), its count for the last 14 days or its weekly target, and two buttons: **min** and **Done ✓**. On a keyboard, 1–9 tick the rows in order.

Bad day? Press the button (or **b**). Every habit swaps to its minimum version — "one sip", "one page" — and ticking them counts exactly the same in every number. Bad-day mode is recorded, so Patterns can tell you how often you needed it.

Last 14 days shows a dot row per habit: dark = done, faded = minimum, grey = skipped. Tap a dot to fix a day you forgot to log.

One line about today. What got in the way, or what helped. On days with a miss it shows up in Patterns.

The rule that makes it work

A habit has a name, an emoji, a **minimum version**, a time of day, an **anchor** ("after coffee", "in bed") and a target: every day, or a number of times a week. Weekly targets are honest — "move 4× a week" is a real plan; "every day" is often a fantasy.

The minimum is the version you can do on the worst day. If you can't do it in bed with a headache, make it smaller. "One push-up", "open the book", "put one thing back where it lives".

Ideas gives you ten habits with minimums and anchors already written. Edit the wording so it sounds like you.

Archive instead of delete — history is kept, and the habit can come back. The app nudges you when you have more than five active: fewer, kept, beats many, dropped.

A month you can look at, and what it says

Month

All habits: darker squares mean more habits done that day; tap a day to see and fix it. One habit: tap a day to cycle done → minimum → skipped → clear. Skipped is for illness and travel — it is excluded from your percentages, so a sick week is not a "bad" week.

Patterns

Pick 14, 30 or 90 days. Completion by habit (the hardest one gets a suggestion: smaller minimum or a different anchor), by day of the week (most people have one), the share of minimum days (that is the system working, not cheating), bad-day count, and your one-line notes from days with a miss — patterns usually hide in three of them.

A short note on the design

Streak apps work for some brains. For a lot of ADHD brains they work until the first missed day — and then the chain is broken, the shame arrives, and the whole thing gets deleted.

This app makes three deliberate choices:

- **Counts, not chains.** "9 of the last 14 days" stays true after a miss.
- **Minimums count.** A one-sip day keeps the identity ("I am someone who drinks water") without demanding the full thing.
- **Skips are neutral.** Illness and travel are not failures; they are removed from the maths.

Anchors ("after coffee") beat clock times for brains that don't feel time passing. Weekly targets beat "every day" for anything that isn't medication.

If a habit keeps failing, the habit is fine — the minimum is too big or the anchor is wrong. Change one of those, not yourself.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-habits/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

I forgot to tick for a week.

Month → tap the days you remember. Or don't. The 14-day count moves on by itself; nothing is "broken".

Can I have more than five habits?

Yes — the limit is a nudge in Settings, not a wall. But three kept habits beat ten abandoned ones.

Reminders?

Anchors replace them: tie the habit to something that already happens. If you need a push, set a normal phone alarm named after the anchor.

Two people, one file?

Keep two copies of the file in two folders, or use two browser profiles — each has its own data.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
