## Focus Flow Home v1.0

a calm ADHD cleaning and home app: panic clean, zones with dust levels, 5-minute resets, meals, laundry and home admin.

**FOCUS  
FLOW**

# Hi. This will be quick.

Focus Flow Home is a real app that lives in a single file. There is no account, no server and nothing to install. You tick your rooms, the app gives every task a rhythm, and quietly tells you what's due. When the doorbell is 20 minutes away, Panic clean takes over.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

## What's in your download

| FILE                                  | WHAT IT IS                                                                 |
|---------------------------------------|----------------------------------------------------------------------------|
| <b>Focus-Flow-Home.html</b>           | The app. Keep this file somewhere safe (your Documents folder is perfect). |
| Focus-Flow-Home-Quick-Start-Guide.pdf | This guide.                                                                |
| README.txt                            | The two-line version of this guide, with your iPhone link.                 |

## The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Home.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** your name, which rooms you have, and a few 5-minute resets. Or tap *"Explore with example data"* first.
- 5 Look at "Due today".** Do one. Or one reset. Or nothing — the bars will still be there tomorrow, without judgement.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

# Rhythms, not schedules

Every task in a zone has a rhythm: daily, every 2 days, weekly, every 2 weeks, monthly, every 3 or 6 months, yearly. The little bar fills as time passes — green, then amber when it's due, then red when it's overdue-ish. There are no dates and nothing "missed"; there's only "the bar is fuller now".

**Tick** a task and the bar resets. That's the whole interaction. 🕒 starts a timer for that task's minutes.

The zone score is a rough "how is this room doing" number. On Today you only see what's due, sorted by how overdue it is, and only seven of them — you don't have to do them all.

## Templates

Kitchen, bathroom, bedroom, living room, hall & entry, whole home — each with sensible tasks and rhythms. Add them, then delete or change anything. Add your own tasks with + on a zone.

On day one, nothing is overdue. The app staggers "last done" so you start calm, not buried.

## Guests in 20 minutes

Pick how long you've got and which rooms they'll see. The time gets split across the rooms, and each room gets five moves that make the biggest *visible* difference — in order. A chime moves you to the next room, so there's nothing to decide.

### The rule

Visible surfaces and floors only. Nothing inside cupboards. If something doesn't have a home, it goes in a basket. Baskets are honest. Doors can be closed.

### Afterwards

It's logged on Today, and the quick tasks in the rooms you touched get their bars reset automatically.

### Quick reset

The 🕒 button on Today starts a 5-minute timer (length in Settings) for one spot. Stop when it chimes — even mid-task. It counts.

## RESETS

# Five-ish minutes, same steps, done

A reset is a tiny routine for one spot: kitchen close-down, launch pad by the door, morning 5, living room 10, bathroom 5. Grab them from **Templates** and edit every step.

Tick items on the card, or press **Start** to run the reset one step at a time, with the minutes shown. Resets reset daily. A half-done reset is a done reset — the goal is momentum.

## Energy check

On Today, tell the app how you are. Low: one 5-minute reset is the whole plan. Okay: due tasks, nothing more. Charged: a good day for an overdue zone.

## Done today

Everything lands here — resets, zone tasks, panic cleans, laundry put away. Your brain will say you did nothing. This list says otherwise.

# The rest of running a home

## Meals

Keep 8–10 **favourites** you can make half-asleep. Tap a day to plan dinner, or **Fill the empty days** from favourites. **I can't decide** picks one at random. Each favourite can list ingredients; "+" ingredients" drops them on the grocery list. Tick items off in the shop; clear the basket after.

## Laundry

Four stages: washer → dryer → to fold → put away. Tap the next stage as the load moves. A load that has sat wet for 8+ hours turns red before it starts to smell. Putting a load away logs it on Today.

## Home admin

Boiler service, car tax, smoke alarm batteries, filters, tenancy renewal — with a date and how often it repeats. Ticking a repeating item creates the next one automatically. Items due within a week show on Today.

# Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

## ✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

## ⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

## Encrypted backups

**Settings** → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

## Opening the app on each device

| DEVICE                    | HOW                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Windows</b>            | Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.                                                                                                                                                                                                                                       |
| <b>Mac</b>                | Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.                                                                                                                                                                                                                                                                                            |
| <b>Chromebook / Linux</b> | Open the file in Chrome from the Files app. Bookmark it.                                                                                                                                                                                                                                                                                                                                                                                   |
| <b>Android</b>            | Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → <b>Add to Home screen</b> gives you an app icon.                                                                                                                                                                                                                                               |
| <b>iPhone / iPad</b>      | Open <a href="https://pablo96si.github.io/focusflow-home/">https://pablo96si.github.io/focusflow-home/</a> in Safari. Tap the Share button (the square with an arrow) → <b>Add to Home Screen</b> → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase. |

### The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

### Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

### Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

## Little questions, quick answers

### **Everything is red.**

That's information, not a verdict. Pick one zone, tick what you actually did, and let the rest wait. Or lower a rhythm — "weekly" can become "every 2 weeks". The app doesn't mind.

### **Can two people use it?**

Yes. The simplest way: one copy of the file on a shared laptop or tablet in the kitchen. Or each person opens their own copy and you split the zones.

### **I did the task but forgot to tick it.**

Tick it now — the bar resets from today. Close enough is fine.

### **The timer keeps running if I leave the screen?**

Yes. It runs in the background of the app and shows the time left in the tab title.

### **Something looks wrong on my screen.**

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.

### **Licence**
