Focus Flow Study v1.0

an ADHD student planner: assignments by due date with tiny first steps, exam countdowns, a study timer with body doubling, class schedule, grades and a weekly plan.

FOCUS FLOW

Hi. This will be quick.

Focus Flow Study is a real app that lives in a single file. There is no account, no server and nothing to install. You add your classes, dump your deadlines, and every day the app says "start with this" — one assignment, one tiny first step, one button. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Study.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Study-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Study.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** your name, your classes, and three things due soon. Or tap *"Explore with example data"* first.
- 5 Press ► on "Start with this".** Ten or twenty-five minutes. Everything you finish lands in Done.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Start with this, due soon, classes today

Start with this. The app picks the assignment that is due soonest and already has a first step, and shows that step. Press ► **25 min on it** or **Break it down**. One button, not a decision.

Due today & tomorrow. Only what's urgent, then a short "this week" list. Tick = done. ★ isn't needed — due dates do the sorting.

Quick capture. Type "essay draft History 45m fri" and press Enter. It understands a class name, minutes or hours, today / tomorrow / a weekday, and a type word (essay, reading, quiz, lab, project).

Classes today lights up the class you're in right now. **Exams** shows the next three with days left and the share of topics covered. **Studied this week** is a small bar chart of your timer blocks.

Press / anywhere to jump to Quick capture.

Overdue, this week, later — and tiny first steps

By due date groups everything into Overdue, This week, Later and No date. **By class** filters with one tap. **Done** keeps the last forty finished pieces of work — read it when your brain says you did nothing.

Each row shows the class, type, rough minutes, the due date and the next tiny step if there is one.  opens the ladder,  starts a timer block on it,  edits.

The task ladder

Task paralysis usually means the first step is too big. Open the ladder and write the smallest possible one: "open the doc", "find the reading list", "do question 1 — just question 1". The first unfinished step is highlighted.  **10-minute version** starts a short timer on exactly that step.

The disc, and body doubling

Pick an assignment (type it or tap a chip), pick a length, press start. The disc shrinks as time passes — a visual timer for time blindness. Ten minutes is a real block.

Body doubling

Studying next to someone makes starting easier. Steady noise does a surprising amount of that job. Tap **Body doubling** to play brown, pink, rain-like or white noise (choose in Settings). Headphones help.

When the block ends

A chime, the block is logged against the assignment, and you choose: break, another block, or stop. Finished blocks show on Today, on the Week view and in the weekly bar chart.

Space starts and pauses the timer on this screen. **Shift+F** hides everything else.

The rest of the term on four screens

Exams

Date, time, room and a topic list. The card shows days left, the share of topics covered, and "about 1 topic a day" — a revision plan you can actually follow. Tick topics as you go; ► starts a timer on one.

Classes

Your timetable, built from slots on each class. Tap + **slot** on a class to add a day and time. Colours carry through the whole app.

Grades

Add grades with a score, a maximum and a weight. Each class shows its weighted average and, if you set a target, what you need on the next equal-weight grade. No drama, just the number.

Week

Seven columns with exams, due work, classes and study minutes. A three-question Sunday review at the bottom.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-study/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

I have more than five classes.

Add them on the Classes screen — there is no limit. The onboarding only asks for five to keep it short.

Can I use it for university and a part-time job?

Yes. Add "Work" as a class and capture shifts as slots. Or keep two copies of the file in two folders — each has its own data.

The noise doesn't play.

Browsers only start audio after you tap something. Tap the Body doubling button once, and check the phone isn't on silent. On iPhone, the Home Screen version plays audio more reliably than a file.

Does the timer keep running if I switch screens?

Yes. It runs in the background of the app and shows the time left next to Study timer in the menu and in the tab title.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
