Good morning, Sam.

Logged today · worst symptom 1/10 · energy 5/5.

Today

Headache / migraine 1/10

Fatigue 1/10

Brain fog 1/10

Nausea 0/10

energy 5/5

6 h

mood 5/5

Stress

Skipped meal

Amitriptyline

Last 7 days

	T	F	S	S	M	T	W
Headache / migraine	8	10	5		6		1
Fatigue	8	7	3		5		1
Brain fog	5	5	2		4		1
Nausea	3	3	0		0		0
Energy	2	1	4		3		5

Tap a cell to log that day. Colour = severity.

Flare started

Edit today

This fortnight

Hardest symptom 🤯 Headache / migraine · 5.2

Days logged 10 / 14

Bad days (≥7) 4

Good days (≤3) 4

Average energy 3.3 / 5

Flares

Sep 4 → Sep 7 4 d · period week

Aug 6 → Aug 11 6 d · weather + two bad nigh

Why log the boring days

Doctors see you on one day. Patterns need the ordinary ones too: the 2/10 Tuesday makes the 8/10 Friday mean something.

Sam's symptoms
Your data lives only on this device. [Shortcuts ?](#)

Focus Flow Symptoms v1.0

a chronic illness and migraine tracker: daily symptom severity in one tap, triggers, energy and sleep, flare mode, patterns that show which triggers actually matter, and a printable 30-day report for the doctor.

Hi. This will be quick.

Focus Flow Symptoms is a real app that lives in a single file. There is no account, no server and nothing to install. Each evening you rate your symptoms 0–10, your energy, your sleep, and tick any triggers — one minute. Patterns then show which triggers actually matter, and the doctor report for the last 30 days prints itself. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Symptoms.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Symptoms-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Symptoms.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** what you're tracking, which symptoms, your regular meds. Or tap *"Explore with example data"* first.
- 5 Log today** (button, or I). Tomorrow, again. Even a "0 everywhere" day is data.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Today, seven days, flares

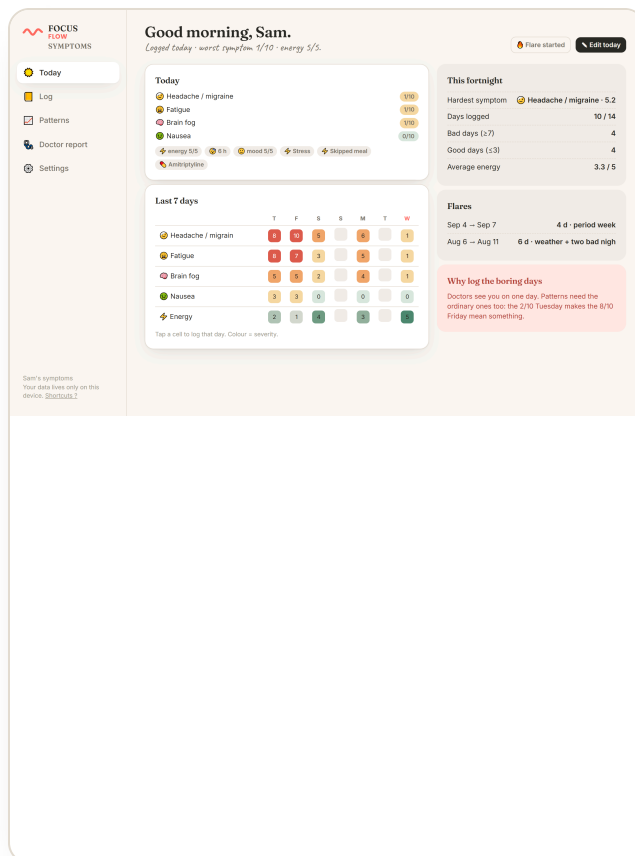

Today shows what you logged: each symptom with its severity in colour (green 0, yellow 1–3, orange 4–6, red 7–10), energy, sleep, mood, triggers and meds. **Log today** opens the one-minute form; **Edit** changes it.

Last 7 days is a heat grid: one row per symptom, one column per day, plus an energy row. Tap any cell to log or fix that day. The shape of a bad week is visible before you read a number.

Flare started marks a bad stretch. While a flare is on, Today shows minimum-mode advice and counts the day; **end it** when it passes. Flares get their own line on the report.

This fortnight: hardest symptom, days logged, bad days (≥ 7), good days (≤ 3), average energy.

Press **l** to log today, **f** to start or end a flare.

One minute, nothing mandatory

Each tracked symptom has a 0–10 row: tap the number (0 = none, 10 = worst ever). Then **energy** 1–5, **mood** 1–5, **hours slept**, a one-line note, **trigger chips** (poor sleep, stress, weather, skipped meal, dehydration, screen time, alcohol, caffeine, hormones, overdid it, noise/lights, food, travel, missed meds — editable) and **meds taken**.

Skip anything you don't know. A blank symptom is "not rated", not zero. You can log past days from the Log screen or the 7-day grid.

Rate the worst moment of the day, not the average — that is what the doctor asks about.

The screenshot shows the 'Log' screen for Wednesday, Sep 16. The form includes the following fields and options:

- Headache / migraine:** 0 = none - 10 = worst ever. A row of numbers 0-10 is shown, with '1' selected.
- Fatigue:** 0 = none - 10 = worst ever. A row of numbers 0-10 is shown, with '1' selected.
- Brain fog:** 0 = none - 10 = worst ever. A row of numbers 0-10 is shown, with '1' selected.
- Nausea:** 0 = none - 10 = worst ever. A row of numbers 0-10 is shown, with '1' selected.
- Energy (1 empty - 5 full):** A row of numbers 0-5 is shown, with '5' selected.
- Mood:** A row of numbers 0-5 is shown, with '5' selected.
- Hours slept:** A text input field containing '6'.
- One line:** A text input field containing 'aura at 3 pm - took triptan - re'.
- Triggers today:** A list of checkboxes for 'Poor sleep', 'Stress', 'Weather change', 'Skipped meal', 'Dehydration', 'Screen time', 'Alcohol', 'Caffeine', 'Hormones', 'Overdid it', 'Noise / lights', 'Certain food', 'Travel', and 'Missed meds'.
- Meds taken:** A text input field.
- Buttons:** 'Clear', 'Cancel', and 'Save'.

The screenshot shows the 'Log' screen with a list of logged symptoms for the past 30 days. The list includes the following entries:

- Wed, Sep 16:** 1 - 1 - 1 - 5 - Stress, Skipped meal
- Mon, Sep 14:** 6 - 5 - 5 - 4 - 3 - Stress, Hormones
- Sat, Sep 12:** 5 - 5 - 3 - 2 - 4 - Weather change, Skipped meal
- Fri, Sep 11:** 10 - 10 - 7 - 5 - 3 - 1 - Stress, Weather change
- Thu, Sep 10:** 11 - 8 - 5 - 5 - 3 - 1 - Poor sleep, Stress
- Wed, Sep 9:** 11 - 8 - 5 - 5 - 3 - 1 - Poor sleep
- Tue, Sep 8:** 11 - 8 - 5 - 5 - 3 - 1 - Poor sleep
- Sun, Sep 6:** 2 - 2 - 2 - 1 - 5 - None
- Fri, Sep 4:** 3 - 3 - 2 - 2 - 4 - "best day in weeks"
- Thu, Sep 3:** 1 - 1 - 1 - 1 - 5 - Hormones

Which triggers actually matter

Choose 30, 60 or 90 days. **By symptom:**

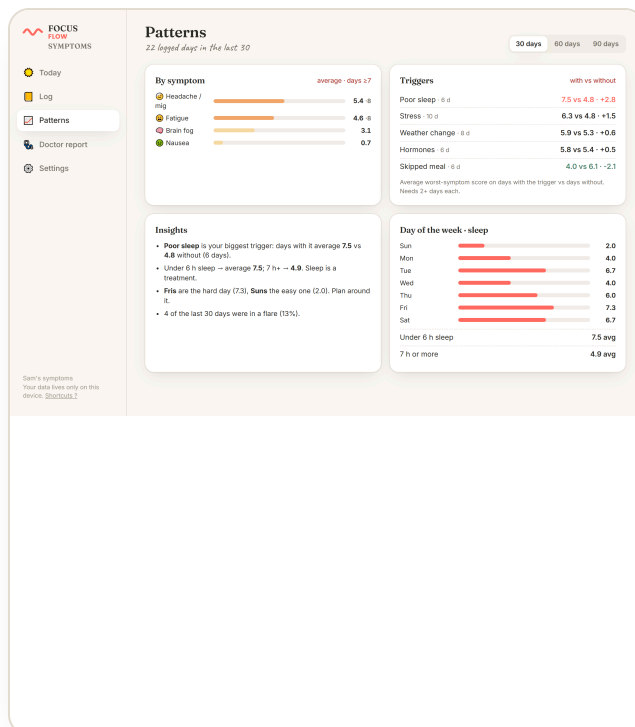

average severity and how many days were ≥ 7 .

Triggers: for each trigger, the average worst-symptom score on days with it vs days without — sorted by the gap. A trigger that shows 7.1 vs 3.4 is real; one that shows 4.2 vs 4.0 is noise.

Day of the week and sleep (under 6 h vs 7 h+) get the same treatment.

Insights are plain sentences generated only when a gap is large enough to mean something — your biggest trigger, the sleep effect, the hard weekday, the share of days in a flare.

This is the part that changes the appointment: instead of "I think stress makes it worse", you bring "stress days average 6.8, others 3.1, over 41 days".

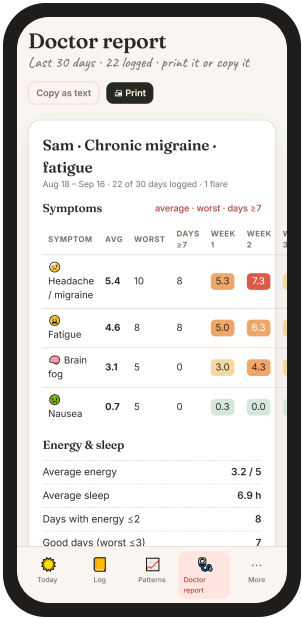

Print it, or paste it into the portal

The last 30 days on one page: each symptom's average, worst, days ≥ 7 and a week-by-week colour strip; average energy and sleep; days with very low energy; good days; triggers noted with counts; flares with dates and causes; medication taken with day counts and your regular list; your notes; and a box for the **questions you want to ask**, saved between visits.

Print opens a clean printable version. **Copy as text** puts the whole report on the clipboard for a patient portal, an email, or a message to a nurse.

Log the boring days too. The 2/10 Tuesday is what makes the 8/10 Friday mean something.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

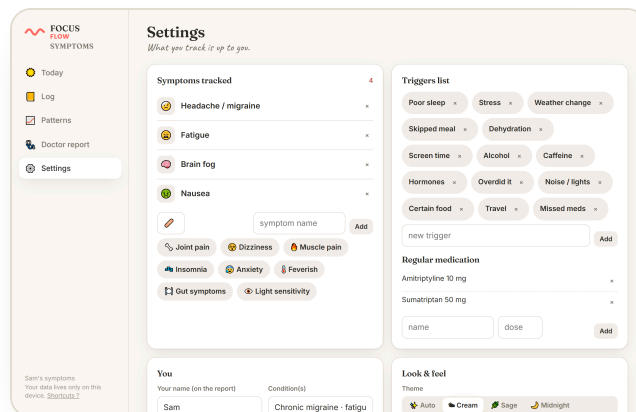

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-symptoms/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

I have several conditions.

Track the symptoms, not the diagnoses — up to five or six works best. Put the conditions in Settings so they print on the report.

Can I log twice a day?

One entry per day, rated at the worst moment. Put the timing in the note ("aura at 3 pm").

Does it replace a migraine diary from my clinic?

It gives you the same data (frequency, severity, triggers, meds) in a form you can print or paste. Check with your clinic if they need a specific format.

Is my data private?

Completely. It lives in this file on this device. No account, no sync, no analytics. Back it up to a place you control.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
