Tap a day to mark attendance. Hours count only lessons ticked done.

**This year**

 **Maya**

63 / 180 days · 126.2 h

 **Leo**

63 / 180 days · 116.5 h

Year from May 1. Required days in Settings — check your local rules.

**Enough is enough**

A morning of maths and reading, an afternoon outside, a book at bedtime is a full school day. The record proves it; you don't have to.

Sam Estrada's homeschool  
Your data lives only on this device. [Shortcuts ?](#)

## Focus Flow Homeschool v1.0

a homeschool planner for real families: a weekly plan per child, one-tap lesson ticks, attendance and hours that count themselves, a portfolio of work and trips, and a printable record of attendance and hours per subject for the year.

# Hi. This will be quick.

Focus Flow Homeschool is a real app that lives in a single file. There is no account, no server and nothing to install. You plan a week per child, tick lessons as they happen, and attendance, hours by subject and the year record count themselves. A portfolio keeps the evidence. That's the whole method. Requirements differ by country and state — the app records; you check what must be submitted.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

## What's in your download

| FILE                                        | WHAT IT IS                                                                 |
|---------------------------------------------|----------------------------------------------------------------------------|
| <b>Focus-Flow-Homeschool.html</b>           | The app. Keep this file somewhere safe (your Documents folder is perfect). |
| Focus-Flow-Homeschool-Quick-Start-Guide.pdf | This guide.                                                                |
| README.txt                                  | The two-line version of this guide, with your iPhone link.                 |

## The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Homeschool.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** your children, your subjects, when the year started and how many days it needs. Or tap *"Explore with example data"* first.
- 5 Plan Monday to Friday** (n adds a lesson; "repeat every weekday" fills the week). Then each day: tick what got done.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

# One tap per lesson

One card per child with today's lessons. **Done ✓** marks the lesson, counts its minutes, and marks the day attended. The header shows hours today and an "attended?" toggle for days without lessons (a trip, a library afternoon). **This week:** hours against your target, and seven day-cells you can tap to mark attendance. **This year:** days of the required number, hours so far.

If a day has no plan, "copy yesterday" gives you the rhythm back in one tap. Enough is enough: a morning of maths and reading plus an afternoon outside is a full day.

# Plan in two minutes

A column per weekday, tabs per child. Add a lesson: subject, what, minutes, notes. Tick **"Repeat every weekday this week"** and one form becomes five lessons. **Copy last week** when the rhythm works. Ticked lessons fade; hours by subject for the week sit underneath.

Lessons don't need a title — "Math · 30 min" is a valid lesson. The title is for you, when it helps.

ATTENDANCE

# A calendar per child

A month calendar, one child at a time. Attended days are filled and show the hours from ticked lessons. Tap any day to toggle — a museum trip counts even without a planned lesson. The header counts days this month and this year against your required number.

Set the year start, required days and weekly hours target in Settings. Many places ask for 180 days or 900–1000 hours; some ask for nothing. The app doesn't decide — it counts.

# Evidence, printed

**Portfolio:** one line each — work sample, trip or visit, project, milestone, book finished — with child, date, subject and a note. This is what you show an assessor and what you'll want to remember in ten years.

**Year record:** per child, from the year start: days attended by month, hours by subject with percentages, lessons completed, books finished, and the portfolio as a table. **Print** gives a clean page with a signature line.

Add a portfolio entry the day it happens, in one sentence. Assessors like dates; you'll like the memories.

## Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

### ✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

### ⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

### Encrypted backups

**Settings** → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

## Opening the app on each device

| DEVICE                    | HOW                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|---------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Windows</b>            | Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.                                                                                                                                                                                                                                                   |
| <b>Mac</b>                | Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.                                                                                                                                                                                                                                                                                                        |
| <b>Chromebook / Linux</b> | Open the file in Chrome from the Files app. Bookmark it.                                                                                                                                                                                                                                                                                                                                                                                               |
| <b>Android</b>            | Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → <b>Add to Home screen</b> gives you an app icon.                                                                                                                                                                                                                                                           |
| <b>iPhone / iPad</b>      | Open <a href="https://pablo96si.github.io/focusflow-homeschool/">https://pablo96si.github.io/focusflow-homeschool/</a> in Safari. Tap the Share button (the square with an arrow) → <b>Add to Home Screen</b> → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase. |

### The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

### Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

### Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

## Little questions, quick answers

### Does it follow a curriculum?

No. It plans and records whatever you do — a boxed curriculum, unschooling with a log, or anything between. Subjects are yours to rename.

### More than two children?

Add as many as you like in Settings. Each has their own colour, week, calendar and record.

### Is this a legal record?

It is an accurate record of days, hours by subject and work. Whether it satisfies your local requirement — and in what form — is for you to check locally.

### Can I share it with a co-parent or tutor?

Export a backup from Settings and import it on the other device. Or keep it on one shared tablet.

### Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
