Reminder

A job search is a numbers game with a feelings problem. Track the numbers here, so the feelings don't have to.

Focus Flow Jobs v1.0

a job application tracker for ADHD brains: a pipeline board from saved to offer, follow-up and ghosting reminders, a weekly applications target, a STAR story bank for interviews, and honest stats that treat rejection as data.

Hi. This will be quick.

Focus Flow Jobs is a real app that lives in a single file. There is no account, no server and nothing to install. Every job sits on one board from saved to offer; Today tells you what's due — an interview, a follow-up, a job that's probably ghosted you; a weekly target replaces guilt; and the stats page counts rejections so your feelings don't have to. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Jobs.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Jobs-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Jobs.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** your weekly target, the jobs already in flight, your follow-up rule. Or tap *"Explore with example data"* first.
- 5 Open Today each morning.** Do what it says. Add anything new with **a**. Close the tab.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

What's due, and nothing else

Next up lists dated steps (an interview tomorrow, a recruiter call Tuesday) and follow-ups that are due — applied N days ago, no reply, not followed up yet. **Done ✓** clears a step; **Draft** writes the follow-up for you; **Sent ✓** logs it.

Saved, not applied shows the jobs you liked but haven't sent, sorted by how much you want them, with an **Applied ✓** button. The tiny first step is written underneath.

Probably ghosted appears after your silence limit (21 days by default). Marking it closes the loop in your head; you can always reopen.

This week is your applications count against the target, plus a two-field quick add: Save for later, or Applied today ✓.

Press **a** anywhere to add a job with all the details.

One board, one list

Pipeline

Four columns: Saved, Applied, Interviewing (screening + interviews), Offer. Tap a card to open it; ← → moves it; ✕ marks it rejected. Closed jobs (rejected, ghosted, withdrawn) stay underneath as chips — never deleted, so the stats stay honest.

A job

Company, role, link, location, salary, source, status, applied date, next step and its date, how much you want it, a contact and notes. Opening a job shows its log — every status change with the date — and a box to add a note: what they asked, what you said, how it felt. **Move to** chips change status in one tap; moving to Offer celebrates.

All jobs

Everything, searchable, filtered by status. / jumps to the search.

Stories first

Most interview questions are the same five questions in different clothes. Write 3–5 true **STAR stories** — Situation, Task, Action, Result — two sentences per box, about 90 seconds out loud. A problem you solved, a mistake you fixed, a conflict you handled, a time you learned fast.

Then map them to the **ten questions they'll ask**. "Tell me about a difficult situation" → the launch story. "Describe a mistake" → the empty-state story. Some questions need no story; say so and move on.

Coming up lists your scheduled interviews. The **before an interview** checklist covers the boring, forgettable things (route, link, water, two questions to ask). Clear it after each one. **Questions to ask them** gives you five good ones.

The screenshot shows the 'Interview prep' screen of the Focus Flow Jobs app. The interface is organized into several sections:

- Left Sidebar:** Contains navigation links: Today, Pipeline, All jobs, Interview prep (highlighted), Stats, and Settings.
- Header:** 'Interview prep' with a subtitle 'Stories first. Then the questions answer themselves.' and a '+ story' button.
- Your stories:** A list of three STAR stories:
 - The launch that nearly slipped:** Situation (Two weeks before a product launch, the checkout redesign was behind and three teams were blocked on it.), Task (I owned the checkout flow and had to get it shippable without cutting the accessibility work.), Action (I kept the design into a multi-ship core and a follow-up, wrote a one-page decision doc, and ran 10-minute daily syncs with engineering.), Result (Shipped on time, conversion up 6% in the first month; the follow-up shipped three weeks later.)
 - Telling a PM their feature wasn't the problem:** Situation (A PM pushed for a new filter UI after complaints about "not finding products".), Task (I suspected search relevance, not filters, and needed to redirect without a fight.), Action (I ran the quick user sessions, showed the recordings, and proposed a two-week search fix first.), Result (Search fix cut "no results" by 40%; the filter project was dropped; the PM asked me to co-run discovery from then on.)
 - The mistake with the empty state:** Situation (I shipped an onboarding empty state that assumed users had imported data.), Task (Support tickets spiked; I had to own it and fix it fast.), Action (I hugged it in the team channel the same day, wrote three variants, tested with 6 users, shipped the winner in a week.), Result (Tickets back to baseline; I added a "first-run" checklist to our design review that we still use.)
- Coming up:** Lists scheduled interviews: 'Northwind - Panel interview' (Sun, Sep 8 - Product designer) and 'Acme Corp - Recruiter call' (Tue, Sep 9 - UI designer).
- Before an interview:** A checklist with items: 'Re-read the posting; note 3 things they care about' (checked), 'Pick 3 stories that match' (checked), 'Two questions to ask them (below)' (checkbox), 'Link / route, outfit, water — tonight, not tomorrow' (checkbox), 'One line why this job, in your words' (checkbox), and 'Phone on silent, notes open, 10 minutes early' (checkbox). Below the list is a note: 'Take notes with "Clear checklist" after each interview.' and a 'Clear checklist' button.
- Questions to ask them:** A section with three prompts: 'What does a good first 90 days look like in this role?', 'How does the team handle focus time vs meetings?', and 'What happened to the last person in this role?'.
- Questions they'll ask:** A section with the prompt 'pick a story for each'.

Numbers, so the feelings don't have to

Funnel: applied → screening → interview → offer, with conversion rates, response rate and median days to a reply. **Applications per week** for the last eight weeks against your target. **By source:** how many you applied to on each, and how many got a call — referrals usually win by a mile. **Closed:** rejected, ghosted, withdrawn, offers.

Rejection is data. A typical search takes 50–100 applications and a handful of interviews per offer. A "no" is almost never a review of you; it is a mismatch, an internal hire, a frozen budget, a form nobody read. The app logs it, counts it, and shows you the price of one offer in applications — so the next one is just the next one.

Set a weekly target you'd hit on a bad week.
Three real applications beat fifteen copy-pastes.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-jobs/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Can it import from LinkedIn or a spreadsheet?

No — it is deliberately a single file with no connections. Adding a job takes two fields; the rest is optional.

What counts as "applied this week"?

Any job whose applied date falls in this week, including ones you add later with an earlier date.

I got an offer. Now what?

Move it to Offer (it celebrates). Withdraw the others when you accept — they stay in the stats.

Two people, one file?

Keep two copies of the file in two folders, or use two browser profiles — each has its own data.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
