For the parent

You don't have to remember anything. That's what this is for. Feed when the number says, sleep when they sleep, and let the handover sheet talk to the next shift.

Focus Flow Baby v1.0

a new-parent baby tracker for sleep-deprived brains: one-tap feeds, sleep, nappies and meds with "last feed 2 h 10 ago" always visible, a 24-hour day strip, growth with percent change, milestones, a symptom log for the doctor and a handover sheet for whoever takes the next shift.

Hi. This will be quick.

Focus Flow Baby is a real app that lives in a single file. There is no account, no server and nothing to install. Every feed, sleep, nappy and dose is one tap; "last feed 2 h 10 ago" is always at the top; the day is one strip; growth and milestones have no deadlines; the health log has times; and the handover sheet tells the next shift everything without you saying a word. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Baby.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Baby-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Baby.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** the baby's name and birth date, mostly bottle or breast, your name. Or tap *"Explore with example data"* first.
- 5 Tap when things happen.** Feed, fell asleep, woke up, nappy. Add details with 🍴 if you ever feel like it.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

The number you always need

Last feed counts up live, with what it was, when, and "next around" (your expected gap, in Settings). When the gap is exceeded the card gets a coral border and the Now badge lights up. **Feed** opens the short form (side, amount, minutes, time); **Fell asleep** starts a timer that becomes **Woke up**.

One tap: Breast L, Breast R, Both, Bottle, Solids; Wet, Dirty, Both, Dry; Meds / vitamin D, Pump, Bath, Tummy time, Note. Tap logs it now; afterwards adds details. You will not remember at 4 am; tap first.

Today lists the day's events newest first. **Since:** last sleep ended, last nappy, last meds, feeds and sleep in the last 24 hours. **Growth:** last weight and change since birth.

Keys: **f** feed, **s** sleep start/stop, **p** wet nappy.

One strip, one page

Day

A 24-hour strip: sleep as blue blocks, feeds / nappies / meds / pumps as coloured marks. Below it the timeline (edit anything), and **Totals**: feeds (with amounts or minutes), longest gap, sleep with the longest stretch, nappies with the dirty count, tummy time. **Last 7 days** of sleep as bars with the feed counts. ← → moves between days; + Entry adds something you forgot, at the right time.

Handover

The button on Now prints one page: last feed / sleep / nappy / meds right now, today so far in order, questions tagged "ask the doctor", and a line for notes. Give it to your partner, the grandparent, the night nurse. Then sleep.

Trends and times, not panic

Growth

Weigh-ins from the clinic as bars, with grams per week since the last one and the percentage above birth weight. Length and head circumference when they measure them.

Milestones tick with a date and show "often around N weeks" — a wide window, not a deadline; a gentle line suggests mentioning it at a check if it's well past.

Health

Symptoms, temperatures, vaccines, check-ups — with times, because "since 3 am" is the answer they want. A quick-temp box; a 38°+ under three months triggers a "call, don't wait" note. Vaccines and visits with a "next" date show at the side. **Copy last 7 days** puts feeds per day, sleep per day and the entries on the clipboard for the clinic.

First laugh, and the shower

Notes with four tags: ★ First (the smile, the laugh, the word), ? Ask the doctor (these print on the handover sheet), 🍼 Me, and plain notes. Milestones nudge you to write the story here too — the date alone won't bring it back.

For you. "Sleep when they sleep" is a lie, but "eat when they eat" is doable. Tag a note 🍼 Me when you notice you're not ok. Three in a week is a reason to tell someone. Baby blues fade by about two weeks; if they don't, that's a call to make — and a very common one.

The expected feed gap in Settings only colours the card and sets "next around". Babies don't read settings.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-baby/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Two parents, two phones?

The file lives on one device. Keep it on the phone that's on shift, or on a tablet by the cot; the handover sheet covers the rest. A backup can be restored on another device any time.

Twins?

Keep two copies of the file in two folders (or two browser profiles) — one per baby, each with its own data.

Does it remind me to feed?

It shows "next around" and colours the card when the gap passes. It cannot make a sound while closed — set a phone alarm if you need one.

Ounces and pounds?

Settings → units. Numbers are labelled, not converted.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
