Odometer

Fill-up

Service

Numbers

Odometer	84,210 km
Last 12 months	20,515 km
Consumption (avg of last 5)	6.4 L/100km
Cost per km	€0.11
Spent in 2026	€2286.44

Last fill-ups

Sep 13 · 44.98 L	€83.43
Sep 6 · 30.72 L	€56.94
Aug 26 · 38.27 L	€63.02
Aug 17 · 28.38 L	€46.35

The habit

At the pump: odometer, litres, cost — 15 seconds.
Everything else the app works out: consumption, cost per km, and when the next service is actually due.

Focus Flow Car v1.0

a car maintenance app for people who forget: every vehicle with its service schedule by date and mileage, what is due next and when, fuel log with real consumption, every cost in one place, documents and renewals (insurance, inspection, tax) with reminders, and a printable service history for when you sell.

Hi. This will be quick.

Focus Flow Car is a real app that lives in a single file. There is no account, no server and nothing to install. Every service item has an interval by date and by distance; every fill-up feeds the odometer and the consumption; every renewal has a date that bites. The overview tells you what is due next, before the warning light does. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Car.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Car-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Car.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** which car and its odometer, which of 14 usual service items apply, when the last oil change and inspection were. Or tap *"Explore with example data"* first.
- 5 At every fill-up (l):** odometer, litres, cost, full tank. **When a service happens (n):** what, where, cost, tick the items it covered.

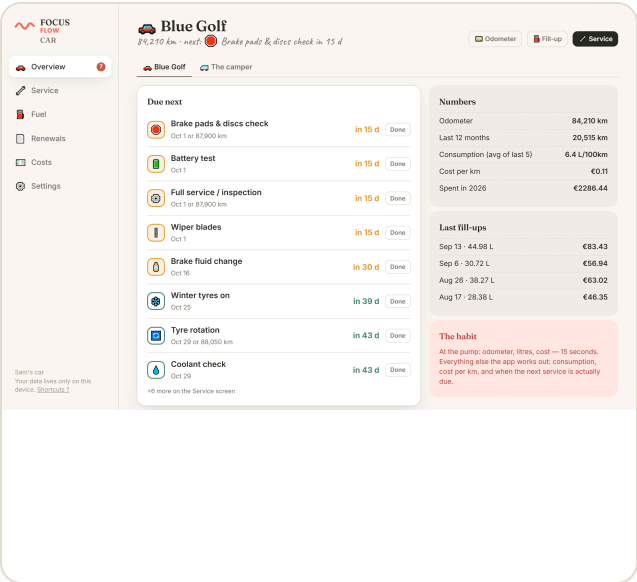

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Due next, renewals, numbers

Due next lists every scheduled item by urgency: red is overdue, amber is within 30 days, green is fine. Each shows the due date and/or odometer and a **Done** button that opens a service log with that item pre-ticked. **Renewals** show days left for insurance, inspection, tax and permits. **Numbers**: odometer, distance in the last 12 months, average consumption, cost per km, spent this year.

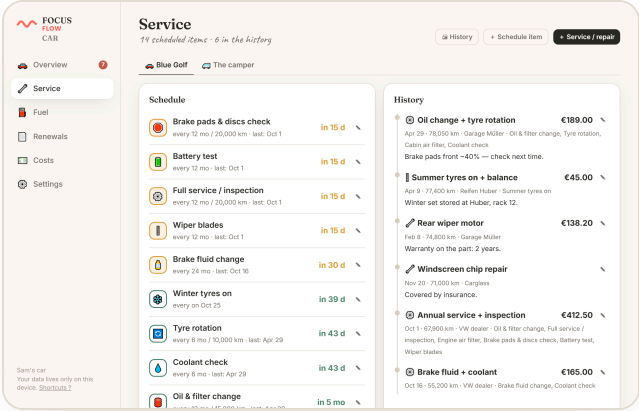

Distance-based items are converted to days using your real average driving from the fuel log, so "in 43 days" means something.

Schedule and history

Schedule: each item has an interval in months and/or km (0 = no rule of that kind) and a "last done" date and odometer. Winter and summer tyres take a fixed date instead. Add your own items — your manual's intervals beat the defaults.

History: every service, repair and tyre change with date, odometer, where, cost, notes, and the items it resets. **Print** gives a clean one-page history for the buyer when you sell, or for the garage.

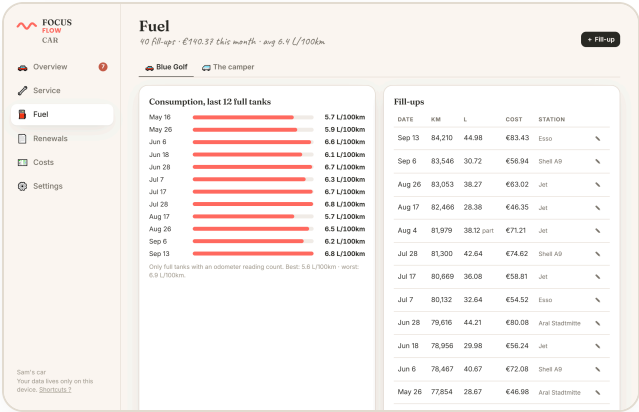

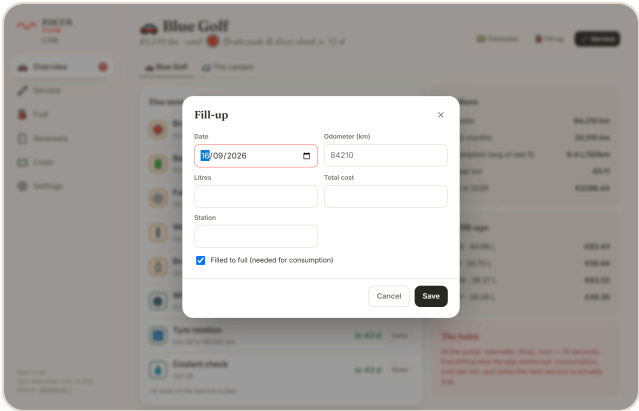

FUEL

Real consumption from 15-second logs

A fill-up is date, odometer, litres (or gallons), cost, station, and whether the tank is full. Consumption is calculated between full tanks; partial fills in between are folded into the next full one, so the number stays honest. The bars show the last twelve tanks, plus best and worst. The header shows this month's fuel spend.

Switch to miles and gallons in Settings and the app shows mpg instead.

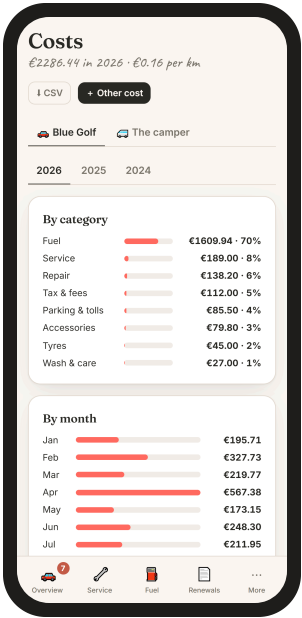

Dates that bite, money that adds up

Renewals: insurance, inspection / MOT / ITV, road tax, parking permit, toll pass, driving licence — with expiry date, provider, policy or reference, cost, claims phone, notes. "Renewed ✓" pushes the date forward by the renewal period.

Costs: everything lands here — fuel, services, repairs, tyres, renewals, and other costs (parking, tolls, washes, accessories). By category with percentages, by month, per km, per year. **CSV** for a spreadsheet.

Cost per km is the number that settles "should we keep the second car".

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

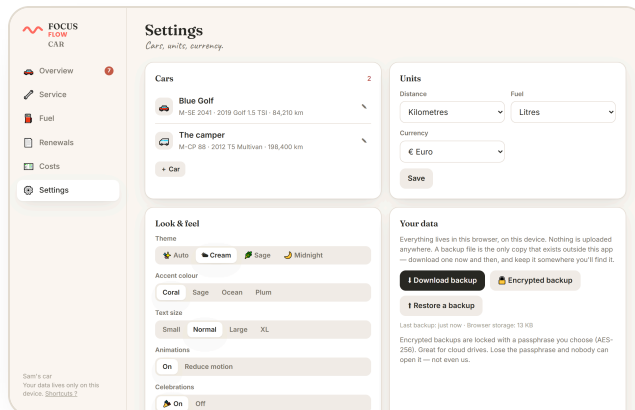

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-car/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Does it remind me?

The Overview badge counts items due within 30 days, and everything is sorted by urgency. There are no push notifications — it's a file, not a service — so a weekly glance is the habit.

Two cars, a motorbike, a camper?

Add each in Settings. Tabs on every screen switch between them; the schedule, fuel, renewals and costs are per vehicle.

Miles and gallons?

Settings → Units. Consumption then shows as mpg; intervals and odometer in miles.

I don't know the exact last service date.

Guess to the month. The app only needs a starting point; the next logged service sets it exactly.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
