

FOCUS FLOW · CARE

Quick Start Guide

from download to a working care binder in 3 minutes

The screenshot displays the Focus Flow Care app interface. On the left is a sidebar with navigation icons for Today, Meds, Appointments, Care log, Contacts, You, and Settings. The main content area is titled 'Good morning, Sam.' and includes a note: '2 doses still to give · next appointment in 2 days. You're doing this.' Below this is a 'Meds today' section showing a list of medications: Metformin 500 mg (8 am, with food), Ramipril 5 mg (8 am), Vitamin D 1000 IU (8 am, with food), Metformin 500 mg (8 pm, with food), and Donepezil 5 mg (9 pm, at bedtime · can cause vivid dreams). Each medication entry has an 'undo' button. A 'Refill soon: Metformin (4 days)' notification is also present. The 'Coming up' section shows an appointment with Dr. Alvarez · GP · 3-month review on Mon, Sep 7 10:20 am at Riverside Practice, with 4 questions ready. On the right, there's a patient profile for 'Mum (Rosa)' with details like Age (77), Conditions (Type 2 diabetes · high blood pressure · early-stage dementia), Allergies (Penicillin), and GP (Dr. Alvarez, Riverside Practice). Below this is a 'You' section asking 'How's your energy today?' with options: Running on empty, Low, Okay, Good, and Full tank. At the bottom right is a 'To do' list with 2 items: 'call about the referral · order pads' and 'Book day centre taster visit (memory clinic)'. The bottom left corner of the app shows 'Sam's care' and a note: 'Your data lives only on this device. Shortcuts ?'.

Focus Flow Care v1.0

a caregiver planner and care binder: medication schedule with a given-log, appointments with questions to bring, contacts, a daily care log you can print for the doctor, an emergency sheet, and a check-in for the carer too.

Hi. This will be quick.

Focus Flow Care is a real app that lives in a single file. There is no account, no server and nothing to install. Meds get a Given ✓ per dose; appointments carry the questions you want to ask and print as a sheet with the meds and the last 14 days of the log; contacts are one tap to call; the emergency sheet is always one tap away; and there is a screen for you, the carer. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Care.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Care-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 **Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 **Open Focus-Flow-Care.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 **Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 **Answer 3 quick questions:** who you care for, their medications, the doctor and the pharmacy. Or tap *"Explore with example data"* first.
- 5 **Tap doses as you give them.** Log one line a day. Before an appointment, print the sheet.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Doses, what's coming, one line, and you

Meds today lists every dose in time order with **Given** ✓ (and undo). The badge on Today counts doses that are due and not yet given. A refill warning appears a week before the date you set.

Coming up shows the next seven days of appointments, how many questions you've written, and **Print sheet**.

Today's log: pick a type (symptom, mood, food, sleep, toilet, fall, visit, note), type one line, Add. That's the whole habit.

On the right: the person's card (age, conditions, allergies, GP), **You** — a one-tap energy check — and a small **to-do** list for the admin that never ends.

Press **e** anywhere for the emergency sheet, **n** for a log entry.

What to give, and what to ask

Meds

Name, dose, times (08:00, 20:00), with food or not, what it's for, refill date, notes, active or paused. Each card shows the last seven days: dark = all doses given, faded = some, empty = none. **Print list** gives a one-page medication list with allergies at the top.

Appointments

Who, what for, when, where — and **questions to ask**, one per line, written whenever they occur to you. After the visit: what they said and the follow-up (which becomes a to-do). **Print sheet** produces one page with the questions (with tick boxes), the current meds and the last 14 days of the log. Doctors read it in a minute and it changes the conversation.

What the visit can't see

Care log

Everything by day, filtered by type. Symptoms carry a severity. Patterns appear within a week — "dizzy after breakfast, three times". **Copy last 14 days** puts it on the clipboard as plain text for an email to the nurse.

Contacts

Grouped: doctors & clinic, pharmacy, insurance & admin, family & friends, care services. Phone numbers are one tap to call. Family notes ("Wednesdays 10–12") feed the *Who can I ask* list on the You screen.

Emergency sheet

One page: name, age, blood type, main carer, **allergies in red**, conditions, GP, current meds, all contacts, and "for anyone stepping in". Print it, put it on the fridge, keep one in the bag.

A note for the carer

Caring for someone is a second job with no rota. The **You** screen asks one question a day — how's your energy — and keeps 14 days of answers. Three low days in a row triggers a gentle line: that's a signal, not a failing.

Who can I ask lists family and friends with what they can do, plus a script that works: specific, dated, small. **Signs to take seriously** is a short list; three of them means calling your own doctor or a carers' line this week.

Respite is care, not abandonment. The person you look after needs you in six months too.

Add "Marta — Wednesdays 10–12" as a family contact. The next time you're on empty, the app shows her name first.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-care/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Two carers, one person?

Keep the file on a shared device or tablet at the person's home — both of you tap doses on the same app. Or share a backup file weekly.

Can I care for two people?

Keep two copies of the file in two folders (or two browser profiles) — each has its own data.

Does it remind me at dose times?

Not by itself — it is a file, not a service. Set phone alarms for the dose times; the app is where you tick them off and see what was missed.

Printing on a phone?

Print sheet opens a page; use Share → Print, or save as PDF and send it to the doctor.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
