

FOCUS FLOW · MEALS

Quick Start Guide

from download to a planned week in 3 minutes

The screenshot displays the Focus Flow Meals app interface. On the left is a sidebar with navigation options: Today (selected), Week, Recipes, Grocery (with a red badge showing 12 items), Pantry, and Settings. The main content area is titled 'Good morning, Sam.' and shows a meal plan for 'Tonight' featuring 'Chilli (double batch)'. The recipe details include ingredients like mince, onions, kidney beans, tomatoes, cumin, and chilli powder, along with instructions and a 'Cooked it ✓' button. Below this, a 'Tomorrow' section shows 'Cheese quesadillas'. On the right, there's a 'Grocery list' with 12 items from Lidl, a 'This week' calendar view with Saturday highlighted, and a 'Quick add to list' section with a text input field containing 'milk, bin bags, that sauce'.

Focus Flow Meals v1.0

a low-effort meal planner for ADHD brains: a week you fill in one tap, a recipe box with effort levels, a grocery list that builds itself by aisle, a pantry with staples, and an "I can't decide" dice.

FOCUS FLOW

Hi. This will be quick.

Focus Flow Meals is a real app that lives in a single file. There is no account, no server and nothing to install. Recipes carry an effort level; the week fills itself with a tap; the grocery list builds itself from the week and groups by aisle; and when you can't decide, a dice decides. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Meals.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Meals-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Meals.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** people at the table, which of the 12 starter dinners you'd eat, fill this week. Or tap *"Explore with example data"* first.
- 5 Week → Build grocery list.** Shop once. Tonight: open Today, cook, tap "Cooked it".

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Tonight, tomorrow, the list, the dice

Tonight. The recipe with its effort level, time, steps and ingredient chips on one card. **Cooked it** ✓ logs it (the dice avoids repeats). **Swap** opens the picker. 🎲 **Something else** rolls.

Nothing planned? Mood chips roll the dice with a filter: easy, comfort, quick, leftovers, no-cook.

Tomorrow shows what's next and says "defrost tonight" for freezer meals. **Grocery list** shows the first items and how many are left. **This week** is a row of seven emoji — tap any night to change it; "Fill empty nights" uses the dice with a rule: an easy meal after a project meal.

Quick add puts "milk, bin bags" on the list without leaving the screen.

Press **d** anywhere to roll the dice.

Effort first, cuisine second

Week

Seven days, one to three meal slots (Settings — most people only plan dinner). Tap a slot: pick a recipe, or a valid non-recipe plan (leftovers, eating out, freezer night, cereal is dinner), or type anything. **Copy last week** when it worked. **Fill empty** rolls the rest. The effort row underneath shows the shape of the week.

Recipes

Every recipe has an effort level — ● no-cook / 5 min, ● 15 min one pan, ● 30 min, ● project meal — plus time, tags, ingredients (one per line, amount first), short steps, a link and a rating. Twelve starters are included: real, cheap, simple. Filter by tag, search by ingredient. "Tonight", "Pick a day" or "Ingredients → list" on each card.

One list, one trip

Grocery

Build from this week reads every planned recipe, splits amounts from names ("2 tins chickpeas"), skips anything your pantry says you have, merges duplicates (and notes which recipes need it), and files each item under an aisle: Produce, Meat & fish, Dairy & eggs, Bakery, Pantry, Frozen, Drinks, Household. Add by hand with commas: "2 lemons, oat milk, bin bags". Tick in the shop; ↑ moves an item to another aisle; **Copy list** gives plain text for a partner or a notes app.

Pantry

Staples you always want in. Tap a chip to cycle have → low → out. "Out" joins the grocery list by itself; "have" is skipped when the list is built. Load 18 common staples in one tap.

Decision fatigue is real

Choosing dinner at 6:40 pm with an empty tank is where most plans die. The dice picks from your recipes, skips anything cooked in the last four days, and can be filtered by mood.

"Tonight ✓" plans it; "Roll again" is always there.

Effort levels are the point. A week of ● project meals fails by Wednesday. The app shows the shape of the week as coloured dots and, when it fills empty nights, puts an easy meal after a hard one. Leftovers are a plan. Freezer night is a plan. Cereal, occasionally, is a plan.

Rate recipes after cooking. Anything under three stars can be deleted without guilt — the box is for dinners you'll actually make.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-meals/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Can I plan breakfast and lunch too?

Settings → Meals to plan. Most people are happier planning dinner only.

Amounts for more people?

Amounts are stored as written on the recipe. Set "people at the table" for your own reference and scale in your head, or write recipes for your usual number.

Two of us shop.

Copy list → paste into a shared note or chat. Or keep the file on a shared device.

Import recipes from a website?

Paste the ingredient list into the recipe form (one per line) and add the link. The app is deliberately simple; it doesn't scrape sites.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
