Focus Flow Meds v1.0

an ADHD medication and symptom tracker: one-tap "taken", "did I take it?" answer, refill countdowns, daily check-ins, side effects and a printable doctor report.

**FOCUS
FLOW**

Hi. This will be quick.

Focus Flow Meds is a real app that lives in a single file. There is no account, no server and nothing to install. You add your medications with their times, tap "Taken" when you take them, do a thirty-second check-in, and print a report before your next appointment. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Meds.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Meds-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Meds.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** your name, your main medication and the side effects you want to watch. Or tap *"Explore with example data"* first.
- 5 Tap "Taken"** on Today when you take a dose. The real time is recorded — late still counts.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Doses, "did I take it?", check-in

Today's doses. Every scheduled dose in time order. **Taken** ✓ records the real time. **Skip** records a deliberate skip (which is different from forgetting, and your doctor will want to know the difference). Undo is always there.

Due / late. A dose becomes "late" after the number of minutes you set (60 by default). Late doses still count — the point is honesty, not perfection.

Did I take it? The last time each medication was logged. This card answers the 3 pm question.

Check-in. One tap to the daily check-in. **Refill soon** appears when something has fewer days left than your lead time. **Next appointment** counts down and reminds you how many questions you've saved.

Reminders. While the app is open (tab or Home Screen), a chime and a message appear when a dose is due. Keep your usual phone alarm as well — this app is the log, the answer and the report.

Press **Enter** on Today to mark the next dose taken.

Times, days, stock, pause

Each medication has a name, dose, one or more times, and the days it's taken (all lit = every day). Tick **with food** to show a reminder on the dose. Add what it's for, who prescribed it and how you refill it — all of it lands on the report.

Stock & refills

Enter how many pills you have and how many you take per dose. Every "Taken" subtracts one. The Refills screen shows days left and the date you'll run out; Today warns you 7 days ahead (change the lead time in Settings). Tap **Refilled** when the new box arrives.

Pause

Stopping something for a while? Press **||** and it disappears from the schedule without deleting its history. Press **▶** to resume.

"As needed" medications

Add them with one time and use **Skip** on days you don't need them — or pause them and log from History when you do.

Thirty seconds a day

Mood, focus and energy on a 1–5 scale, sleep in hours, appetite, and side-effect chips. Everything saves as you tap. Add a one-line note when something is worth telling your doctor ("crash at 4 pm").

The 14-day grid shows focus at a glance; tap a day to edit it. After two weeks the **Pattern** card compares focus on days you took everything with days you missed a dose — often the single most useful number in an appointment.

History

Thirty days of every dose with its real time, filterable by medication. Forgot to log yesterday? "log taken" fixes it. **↓ CSV** exports the whole log for a spreadsheet or a clinic.

The 10-minute appointment, prepared

Pick 30, 60 or 90 days. The report lists your current medications with adherence per medication, overall averages (mood, focus, energy, sleep, low-appetite days), side effects by frequency, missed or skipped doses, your notes, and your questions.

Print / PDF prints just the report (no menus).

Copy text puts it on the clipboard for an email or a patient portal.

Questions

Add questions the moment you think of them. Tick them off in the room. The next appointment shows on Today with a countdown.

Your data never leaves the device — printing or copying is the only way anything gets out, and you're the one doing it.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-meds/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Will it remind me when the app is closed?

No — nothing runs in the background, which is also why nothing can leak. Keep a phone alarm for the time itself; use this app to log, to answer "did I?", and for the report.

Can I track two people?

Open the file in a second browser profile, or keep two copies in two folders. Each has its own data. Or add each person's medications with their name in the emoji field.

I missed logging for three days.

History → "log taken" on each dose, or leave them blank. Honest gaps are fine; the report is for you and your doctor, not for a score.

Is this medical advice?

No. It is a tracker. Decisions about medication belong to you and your prescriber.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
