FOCUS FLOW
CYCLE

Today

Calendar

Patterns

History

Phases

Settings

Good morning, Sam.

Day 21 of ~29 · 🍌 Luteal phase · next period in 9 days.

Today's phase

Luteal period in 9 days

Cravings and sensory overload are common. Snacks ready, headphones handy, say no early.

Today logged

mood 3/5 energy 2/5 focus 2/5 meds 3/5 sleep 2/5 cravings

sensory overload RSD spike low mood brain fog

"cried at an advert"

Edit

Your luteal pattern

18 logged days

Focus		2.1 ↓
Energy		2.4 ↓
Mood		2.3 ↓
Meds felt		2.3 ↓

Usual here: tearful (11×), RSD spike (9×), insomnia (9×), sensory overload (8×).

Period started

Edit today

Coming up

Next period Sep 14 · in 9 days

Luteal starts now

PMS window Sep 9 → Sep 13

Cycle length ~29 days (last 4)

Predictions get better after 3 logged cycles. They are estimates, not contraception.

Last 14 days

Colour = phase · bright = logged · tap a day to log it.

Menstrual Follicular Ovulation Luteal

Why this matters for ADHD

Estrogen helps dopamine work. When it drops (luteal, period), many people find stimulants feel weaker, focus is harder and rejection stings more. Knowing the date takes the mystery out — and gives you data for your prescriber.

Sam's cycle
Your data lives only on this device. [Shortcuts ?](#)

Focus Flow Cycle v1.0

a period and cycle tracker built for ADHD brains: predictions, a phase card for today, daily focus / energy / mood / meds logging, and patterns that show how your symptoms and medication change across the cycle so you can plan around it.

Hi. This will be quick.

Focus Flow Cycle is a real app that lives in a single file. There is no account, no server, no ads and nothing to install. One period date gives you phases and predictions; two minutes a day — mood, energy, focus, how the meds felt, a few symptom chips — gives you Patterns: what each phase does to your ADHD, in your own numbers. That's the whole method.

Everything you type stays on your device. Nobody can see it — not us, not anyone. The trade-off is that **you** are in charge of backups (see "Your data"). It's one tap; the app reminds you.

What's in your download

FILE	WHAT IT IS
Focus-Flow-Cycle.html	The app. Keep this file somewhere safe (your Documents folder is perfect).
Focus-Flow-Cycle-Quick-Start-Guide.pdf	This guide.
README.txt	The two-line version of this guide, with your iPhone link.

The 3-minute start

- 1 Unzip the download.** Windows: right-click → Extract All. Mac: double-click the ZIP.
- 2 Open Focus-Flow-Cycle.html.** Double-click it. If it opens in the wrong program, right-click → Open with → Chrome / Edge / Firefox / Safari.
- 3 Bookmark it** (Ctrl/Cmd + D) so it's one click away from now on.
- 4 Answer 3 quick questions:** your last period start date (plus earlier ones if you remember), and two preferences. Or tap *"Explore with example data"* first.
- 5 Log today** (the button, or I). Tomorrow, again. Patterns fills in after a cycle or two.

Nothing you do here is permanent. Every delete has an Undo. "Start fresh" is always in Settings. Play.

Phase, tip, your pattern, what's coming

The header says the cycle day, the phase and when the next period is due. The **phase card** carries one practical tip for today; in the last days before a period it adds a **PMS window** warning.

Log today opens the two-minute form; once logged, the card shows your chips and numbers. **Your pattern** for this phase shows your average focus, energy, mood and meds here, with arrows against your overall average, and the symptoms you usually get in this phase.

Coming up: next period, luteal start, PMS window (and the fertile window if you turned it on). **Last 14 days** is a colour strip — phase colour, bright if logged; tap a day to log it late.

Press **l** to log today, **s** when a period starts.

Four numbers and a few chips

Flow (none → heavy) and **pain** (none → bad).

Five 1–5 scales: **mood**, **energy**, **focus**, **meds felt**, **slept**. Symptom chips written for ADHD brains: brain fog, irritability, sensory overload, RSD spike, hyperfocus, restless, tearful, cravings, insomnia — plus the usual cramps, headache, bloating. One line of note.

Logging flow on a day outside a period starts a new period (or extends the current one) automatically. Tap any calendar day to log it late; the phase for that day is shown in the title.

Skipped days are fine. Patterns needs a handful of logged days per phase, not every day.

Your own numbers, by phase

By phase: average focus, energy, mood, meds and sleep for menstrual, follicular, ovulation and luteal — as bars, so the shape jumps out. **What you get, when:** the top symptoms per phase with how often. **Insights** are plain sentences generated when a gap is real: "focus drops 48% in luteal", "meds feel 2.3 vs 4.3 — show your prescriber", "mood dips hard in the last week — ask about PMDD". **Cycle length:** the last cycles, average cycle and period.

Why it matters: estrogen helps dopamine work. When it falls, many people with ADHD find stimulants feel weaker, focus is harder and rejection stings more. Seeing the date on it turns "what is wrong with me" into "it's day 24" — and gives you data for a real conversation with a prescriber.

Plan the month, keep the record

Calendar

Phase colours on past days, dashed outline for predicted periods, a marker on the estimated ovulation day, and the focus score on each logged day. Book the hard things in the green weeks; go easy in the purple ones. Periods are listed underneath — tap one to fix its dates or mark the end.

History

Every logged day with its phase, and every period with its length and the cycle it started.

Phases

The four phases, ADHD edition: what happens hormonally, what many ADHDers report, what helps. And a note: PMDD is more common with ADHD and treatable — if the last week is regularly very hard, say so to a doctor.

Predictions are estimates. They improve after three cycles and are never a form of contraception.

Where your data lives, and how to keep it safe

The app saves automatically to your browser's local storage on this device. It never sends anything anywhere. That means two things:

✓ Private by design

No account, no password, no email, no tracking. Closing the tab, restarting the computer, going offline — all fine, your data is still there when you come back.

⚠ Backups are yours to make

Clearing browser data, using a private/incognito window, or some "cleaner" apps can wipe local storage. So, once in a while (the app reminds you after 14 days of changes):

- 1 Settings → **Download backup**. A small .json file lands in your Downloads.
- 2 Move it somewhere you'll find it (a folder, or your cloud drive).
- 3 To restore — on this or any other device — Settings → **Restore a backup** and pick the file.

Encrypted backups

Settings → **Encrypted backup** locks the file with a passphrase you choose (AES-256). Perfect for cloud drives. There is no reset — if you lose the passphrase, nobody can open it, not even us.

Using the app in a private/incognito window will lose your data when the window closes. Use a normal window.

Sharing a home or a household? Each person opens the file in their own browser profile — data is kept separately.

Opening the app on each device

DEVICE	HOW
Windows	Keep the .html file in Documents. Double-click → opens in Edge or Chrome. Bookmark it. Optional: in Edge/Chrome, menu → "Install page as app" / "Create shortcut" → it gets its own window and icon.
Mac	Keep the file in Documents. Double-click → Safari (or right-click → Open With → Chrome). Bookmark it, or drag the address bar icon to the Dock.
Chromebook / Linux	Open the file in Chrome from the Files app. Bookmark it.
Android	Copy the file to your phone (email it to yourself, or use Google Drive → Download). Open it with Chrome from the Files app. Chrome menu : → Add to Home screen gives you an app icon.
iPhone / iPad	Open https://pablo96si.github.io/focusflow-cycle/ in Safari. Tap the Share button (the square with an arrow) → Add to Home Screen → Add. You now have a Focus Flow icon that opens full-screen, works offline and keeps your data on your phone. The link only serves the app — nothing you type is sent to it. Please keep the link private; it is part of your purchase.

The web-app link works everywhere

The same link also works in Chrome on Android (menu : → Add to Home screen), in Edge/Chrome on Windows (Install app) and in Safari on Mac. Use the file or the link — whichever you prefer. Data is stored separately in each, so pick one and use a backup file to move between them.

Moving to a new device

Old device: Settings → Download backup. New device: open the app → Settings → Restore a backup. Two minutes.

Updates

Re-download from your Etsy purchases page any time. Open the new file, then Restore a backup if your data isn't already there.

Little questions, quick answers

Irregular cycles?

Log the start dates; the app averages the last six and tells you in Patterns whether to trust the dates or just the phase colours.

I don't take medication.

Leave "meds felt" empty. Everything else works the same.

On hormonal contraception?

Phases as described won't apply the same way. Use the daily log and Patterns by cycle day instead of trusting the phase names.

Is my data private?

Completely. It lives in this file on this device. No account, no sync, no analytics. Back it up to a place you control.

Something looks wrong on my screen.

Try a different browser (Chrome, Edge, Firefox and Safari are all supported), and make sure it's up to date. Then message us on Etsy with a screenshot — we answer.
